Education

B.Tech in Artificial Intelligence Engineering
(Expected Graduation: 2027)

IIT Madras – Diploma in Programming / Data Science
Relevant Coursework: Data Structures & Algorithms, Database Systems, Machine Learning, Software Development, Operating Systems

Technical Skills

Languages: Python, Java, C
Frameworks / Tools: Flask, Git, HTML, CSS, JavaScript
Machine Learning: Scikit-learn, Feature Engineering, Model Evaluation
Databases: SQLite, SQL
Concepts: Data Structures, Algorithms, OOP, REST APIs, SDLC, Debugging

Projects

Phishing Detection Chrome Extension | Machine Learning, JavaScript
• Built browser extension to detect phishing websites using ML models trained on **22 engineered URL features**
• Implemented feature extraction and model inference to classify suspicious URLs in real time
• Presented working prototype at a university hackathon demonstrating ML-based web security detection

Vehicle Parking Management System | Flask, Python, SQLite
• Developed full-stack parking management platform with **user authentication, booking, and spot allocation**.
• Designed relational database models and backend APIs using **Flask and SQLite.**
• Implemented modular architecture supporting scalable backend operations

Placement Portal System | Web Development
• Built web platform for managing **job postings, applications, and student placement workflows**
• Implemented backend logic and database integration for structured data handling

Machine Learning Projects | Python, Deep Learning

Multi-Class Sentiment Analysis (NLP)
• Built ML pipeline using **TF-IDF feature engineering and ensemble models** for 3-class sentiment classification

Facial Attribute Prediction

• Developed **CNN models for age regression and gender classification** using deep learning techniques

Protein Secondary Structure Prediction

• Implemented **Bi-Directional RNN/GRU sequence models** for structured biological data prediction

---

Additional Experience

Hackathon Participant – GITAM University Tech Fest

- Independently built a phishing detection prototype under hackathon constraints and was in Top 10.
- Presented model architecture, feature engineering strategy, and evaluation results to judges

---

Core Competencies

- Data Structures and Algorithmic Problem Solving
- Object-Oriented Programming
- Machine Learning Model Development
- Backend Web Development
- Debugging and System Design Thinking
