---

## Professional Summary

AI engineering undergraduate pursuing a **dual academic track in Artificial Intelligence and Data Science** through a B.Tech degree and the IIT Madras BS in Data Science and Applications program. Experienced in designing and experimenting with machine learning models across NLP, computer vision, and sequence-based prediction tasks. Interested in exploring research-driven approaches to build intelligent systems that address large-scale real-world problems.

---

## Education

**B.Tech in Artificial Intelligence Engineering**
Vignan's Institute of Information Technology — Visakhapatnam
Expected Graduation: 2027

**IIT Madras – Diploma in Data Science and Applications(online)**
Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Systems, Deep Learning

---

## Technical Skills

**Programming Languages**: Python, Java, C
**Machine Learning & AI**: Supervised Learning, Feature Engineering, Model Evaluation, Neural Networks, Deep Learning, Natural Language Processing, Computer Vision
**Frameworks & Libraries**: Scikit-learn, PyTorch, NumPy, Pandas
**Software Development**: Flask, REST APIs, Git Version Control, HTML, CSS, JavaScript
**Core Computer Science**: Data Structures, Algorithms, Object-Oriented Programming, Database

---

## Research & Machine Learning Projects

**Multi-Class Sentiment Analysis (NLP)**

- Built an end-to-end text classification pipeline using TF-IDF feature engineering and ensemble models for three-class sentiment prediction.
- Evaluated model performance and explored potential applications such as automated feedback analysis.

**Facial Attribute Prediction (Deep Learning)**

- Developed CNN models for age regression and gender classification using image datasets.
- Experimented with architectures from scratch and transfer learning approaches.

**Protein Secondary Structure Prediction**

- Implemented Bidirectional RNN/GRU models to predict structural properties of biological sequences.
- Conducted preprocessing and error analysis to evaluate sequence-level predictions.

**Phishing Detection System**

- Engineered 22 URL-based features and trained classification models to identify phishing websites.
- Built prototype system demonstrating real-time classification of suspicious URLs.

## Software Projects

**Vehicle Parking Management System**

- Built full-stack application using Flask and SQLite for parking reservation and spot management.

**Placement Portal System**

- Developed web platform for managing job postings, applications, and student placement workflows.

## Activities & Leadership

**Hackathon Participant**

- Participated in multiple university and technical hackathons, collaborating on rapid prototyping of software and machine learning solutions.

**Technical Event Volunteer / Coordinator**

- Supported organization of university technical and cultural events, assisting in coordination and logistics for student activities.

## Research Interests

Machine Learning
Natural Language Processing
Computer Vision
AI Systems
